Preserve® Your Home or Office with Sustainable Plastic Ware:

EcoGreenOffice is proud to announce that it is one of few online retailers offering 100% recycled plastic ware. The announcement comes as EcoGreenOffice continues to become the nation's one-stop shop for green office products and services.

Recycline, the manufacturer of Preserve® products, provides high quality recycled content and recyclable products. The line of sustainable goods includes: Preserve® and Preserve® Jr Toothbrushes, the Preserve™ Tongue Cleaner, the Preserve™ Razor Recyclable and the Preserve™ Replacement Blades, Preserve™ Tableware and Preserve™ Tumblers, all of which are available at EcoGreenOffice.com.

Why use a recycled or recyclable toothbrush?

If we all obey our dentists, toothbrushes will begin to make a pretty significant impact on landfills. At present replacement rates, annual toothbrush waste amounts to about 50 million pounds. With the Preserve, significant amounts of plastic waste are diverted from landfills back into usable goods. As toothbrushes become more and more of a consumable, using recycled materials and the Preserve's recyclable design makes more and more sense.

Using a recycled toothbrush does not mean you are using someone's old teeth cleaner. The Preserve's materials are made out of polypropylene, which is available in post-consumer and pre-consumer recycled plastics. The main source comes from Stonyfield Farms and after reprocessing, the plastics are tested to confirm cleanliness.

Preserve™ Tableware is an incredible innovative line of sustainable plastic ware. The best part - the plates, tumblers and cutlery are all dishwasher safe! These products are perfect for office break rooms and the green thinking home owner. Preserve™ Tableware is guaranteed not to warp or break and the plastic is 100% recyclable as well. Preserve™ plastic ware can be purchased at www.EcoGreenOffice.com
