Post Consumer Recycled Plotter Paper now Available at EcoGreenOffice:

EcoGreenOffice is proud to announce that the often difficult to find **post consumer plotter paper** is now available for purchase. The demand for post consumer blotter paper has recently grown exponentially by design and engineer firms looking to make a positive impact on the environment. Hundreds of thousands of virgin paper rolls are used every year, which means more trees are harvested, more energy is used and more water is needed for production: it's about time we had an alternative.

EcoGreenOffice offers a wide variety of post consumer plotter paper in [Inkjet](#) and [Xerographic](#) Bond rolls at affordable prices.

Recycled plotter paper requires 60% less energy to make and can make calculated impacts if used. In fact, one ton of recycled paper saves 4,000 KWH of energy, 7,000 gallons of water and 17 trees.

EcoGreenOffice is a one-stop shop for green office products and services. It is a value driven company with a built in network providing additional exposure to businesses practicing sustainable methods.
